**New HD Video Servers from 360 Systems at HD World**

*- Designed for mid-market broadcasters and Pro A/V applications, new HD-MAXX sets new standard for price to performance -*

**Westlake Village, CA (October 8, 2008)** 360 Systems' new family of HD-MAXX video servers will be shown for the first time at the HD World Expo in New York, October 14-17. The HD-MAXX family is designed to deliver the features and reliability required for broadcast and Pro A/V applications, while setting an important new standard for price-performance.

Two models will be shown, the MAXX-2400HD and MAXX-1200HD. Key features of the MAXX-2400HD include 2 video inputs, 4 outputs, 32 audio channels, and 12 terabytes of internal storage. A rich package of production tools is standard - including trimming, slow-motion, playlisting, and remote workstation software.

The smaller scale MAXX-1200HD provides a single input, 3 outputs, 24 audio channels, more than 70 hours of program storage, and features the same production capabilities as its big brother. The ability to simultaneously record, trim, and play a live feed - even at slow-motion - make the MAXX-1200HD an excellent choice for sports and live events.

A detailed color brochure is available for the MAXX-2400HD and MAXX-1200HD. To request a brochure or obtain more information on any of 360 Systems' video server products, contact the company at (818) 991-0360, or e-mail [hdservers@360systems.com](mailto:hdservers@360systems.com).

***360 Systems broadcast video products will be exhibited at HD World Expo in booth #1142.***

**360 Systems Image Server**

The Image Server family of video and graphics servers continues a 360 Systems tradition of designing with advanced technology to produce enhanced performance, exceptional feature sets and substantially lower prices. 360 Systems brings legendary quality and reliability to broadcasting and Pro A/V projects. With 35 years of experience and 30,000 hard-disk products in service worldwide, 360 Systems leads the field in practical experience.

**About 360 Systems**

360 Systems is a leading developer of digital video and audio products for broadcasting and Pro A/V. The company has a 36-year legacy of producing award-winning hardware solutions that bring efficiency and economy to content delivery. The company has more than 30,000 installed hard disk units around the globe. Brands include Digicart®, Instant Replay®, Image Server™ and MAXX™ families of video servers.

360 Systems is a privately owned corporation based in Westlake Village, CA. More information on its products is available at [www.360systems.com](http://www.360systems.com).
